Marea

Sell before it spoils.

A sales copilot for small-scale fish sellers who haggle on WhatsApp. Code does the math. Gemma on AMD GPUs writes the words. The seller decides.

35%

of the world's fisheries and aquaculture harvest is lost or wasted every year.

SOURCE: FAO

01

Fresh fish lasts 1 to 3 days.

02

Every buyer haggles on WhatsApp.

buenas, te doy 700 lps x las 10 lbs de camarón, me las lleva mañana a Sambo Creek?

BUYER · WHATSAPP · 9:02

Accept?
Counter?
Wait?

L 70 a pound is **below the seller's floor**. But the shrimp has **18 hours of freshness left**, and tomorrow it may not sell at all.

Read. Decide. Close.

Read

Rules in code read product, pounds, offer, zone and day. Gemma on AMD reads what the rules cannot.

Decide

DECIDE TÚ flags the deals that need the seller and shows the numbers: sell now or wait.

Close

One click confirms the order, updates the stock on ice and writes the receipt.

IN

Buyer message

WhatsApp or Marketplace, pasted as written.

→

RULES + GEMMA

Read it

Rules first; Gemma on AMD reads the rest. Code checks every number.

→

PANDAS

Do the math

14-day forecast, freshness, sell now or wait.

→

AMD TOKEN FACTORY

Gemma on AMD GPUs

Writes the reply, the counter-offer and the daily post.

→

OUT

Seller decides

Reply, order and receipt, one click each.

The model never sets a price.

Code keeps only numbers the buyer actually wrote, and checks every price the model writes. If one is not in the catalog, Marea falls back to a template and says so.

ACCEPT L 70 A POUND

L 1,797

WAIT FOR LIST PRICE

L 1,097

+L 700

by selling now, because 23 pounds would spoil before other buyers take them.

```
Accept = offer × pounds + list price × what other buyers still take
Wait   = list price × what other buyers take before the lot spoils
```

30/30

synthetic buyer messages read correctly: typos, "lps", numbers in words, several products.

10/10

hard messages read by Gemma on AMD and checked by code. Rules alone: 0/10.

L 3,110

cash today when five buyers want the same shrimp, vs. L 1,590 answering in order.

MIT

open-source repo and a live app anyone can try.

Honest limits: all data is synthetic, and there is no WhatsApp integration yet. The seller copies each message.

FIRST USERS

Artisanal fish sellers and fishing cooperatives on the Honduran coast.

NEXT

Anyone who sells something perishable on WhatsApp: produce, bakeries, dairy.

BUSINESS MODEL

A low monthly subscription, per seller or per cooperative.

A hypothesis we still have to validate.

Marea

Sell before it spoils.

BUILT ON AMD

Gemma-4-31B-IT on AMD GPUs through AMD Token Factory reads what the rules cannot and writes every reply. Rules and math in Python and pandas.
